As required under the Toxic Substances Control Act (TSCA), as amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act, EPA issued five final rules in December 2020 to reduce exposures to certain chemicals that are persistent, bioaccumulative and toxic (PBT). These chemicals build up in the environment over time and can therefore have potential risks for exposed populations, including the general population, consumers and commercial users, and susceptible subpopulations (such as workers, subsistence fishers, tribes and children).¹ The final rules are published in the Federal Register and govern the 5 PBT substances listed in Table 1.

Table 1, Five PBT Substances -- TSCA 6(h)

Chemical Name	Abbreviation	CAS #
Decabromodiphenyl ether	DecaBDE	1163-19-5
Phenol, isopropylated phosphate (3:1)	PIP (3:1)	68937-41-7
2,4,6-tris(tert-butyl)phenol	2,4,6-TTBP	732-26-3
Hexachlorobutadiene	HCBD	87-68-3
Pentachlorothiophenol	PCTP	133-49-3

Roehm America LLC affirms that all extruded and cast acrylic sheets, as well as all rods, tubes and films sold under the brand ACRYLITE® are manufactured without intentional addition of the substances listed in Table 1. This affirmation also applies to the last 24 months of manufacturing.
